

# A NEW MODEL FOR RESEARCH-BASED LEARNING

Dr. Eileen Lübcke &  
Anna Heudorfer

(Hamburg Centre for University  
Teaching and Learning)

[www.fides-projekt.de](http://www.fides-projekt.de)  
twitter: FideS\_Projekt

# WORKSHOP TIMETABLE

1. Introduction to the model (15 min.)
2. Group work on the curriculum level of the model (20 min.)
3. Group work on the pedagogical level of the model (30 min.)
4. Feedback

## Inquiry-based learning

“Inquiry-based learning aspires to engage students in an **authentic scientific discovery process**.

From a pedagogical perspective, the complex scientific process is divided into **smaller, logically connected units** that guide students and

draw attention to important features of **scientific thinking**”

(Pedaste et al. 2015, p. 48).

## Inquiry-based learning

“(...) umbrella term

covering a range of pedagogical approaches that are united by the central place they give to **students’ investigative work**

(addressing questions and solving problems)”

(Aditomo et al. 2013, p. 1239).

## Undergraduate research

“inquiry or investigation or a **research-based activity**

conducted by an undergraduate student that makes an **original intellectual or creative contribution**

to the discipline and/or to understanding”

(Brew 2010, p. 38).

## Undergraduate research

“a high-impact **educational practice** that has the ability to capture **student interest and create enthusiasm** for and **engagement** in an area of study”  
(Hensel 2012, p. 2)

# APPROACHES TOWARDS RBL

- No established definition of RBL
- Two approaches towards RBL (Simons and Elen 2007)

## Functional approach

- Focus on “the function of research from the viewpoint of teaching” (p. 619)
- Learning theories in the background
- Connection to the current employability discussion

## Reflective approach

- Focus on “a subjective formation of one’s character” by striving for objectivity through science (p. 624)
- Research as the core idea of the university
- Researchers as learners and learners as researchers

# APPROACHES TOWARDS RBL

**Functional approach**

**Reflective approach**

- Long tradition towards the reflective approach (Humboldt's sense) in Germany
- Research as the object of academic teaching and learning across all disciplines
- Academic learning is research-based in its core (Reinmann 2016)

## Curriculum Decisions

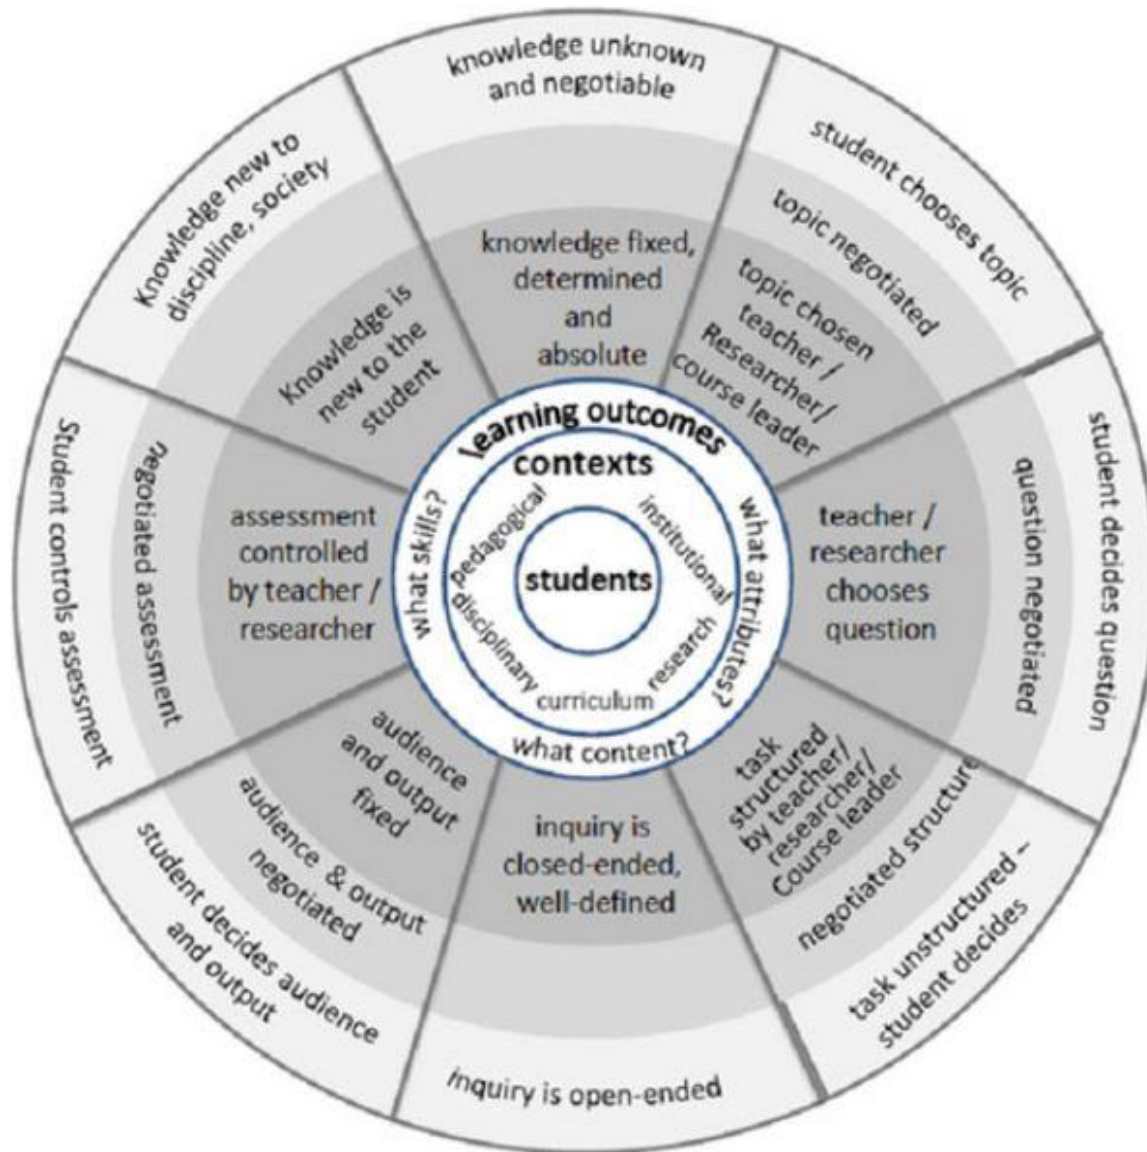

“(...) **curriculum decisions** have to be taken about the **overall structure and framework** of the undergraduate research experience, what it is intended students should **gain** from it and how and whether their work is to be **assessed**”  
(Brew 2013, p. 606).

# CRITIQUE ON EXISTING RBL-MODELS

- Few insights into the curricular framework of RBL
- Many models conflating the levels of curriculum and pedagogy in their analysis
- Differentiation useful to analyze the teachers' power in decision-making processes
- Need for a practical framework to assist lecturers in designing their research-based courses

(Brew 2013)

# BREW'S RBL-MODEL (2013)

Brew 2013, p. 613

# FIDES-PROJECT

- Funded research in 19 projects at German universities
  - Research-based learning in the students' first year at university
  - Variety of programmes WITHIN the concept of research-based learning
  - Projects include mostly extra-curricular activities
- Aim of our project: Develop materials to support projects and centers of teaching and learning on research-based learning

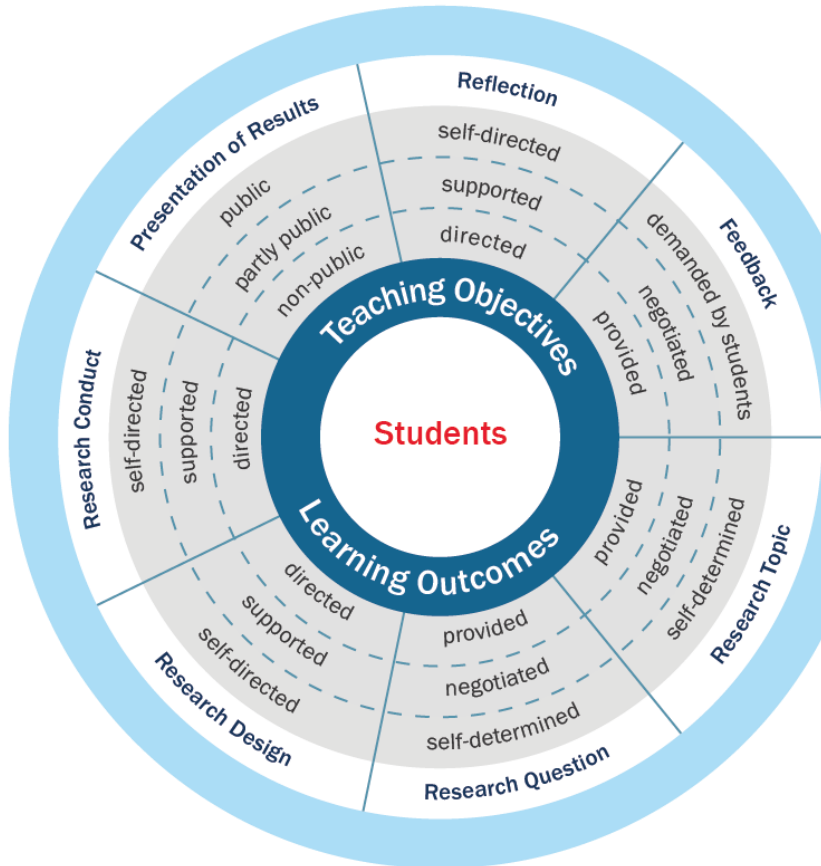

## FURTHER DEVELOPMENT OF BREW'S MODEL

- Separated representation of pedagogical decisions and curricular / organisational conditions
- Epistemological aspects of model as separate question
- Additional aspects with regard to reflection and feedback, details on research process

# FURTHER DEVELOPEMENT OF BREW'S MODEL

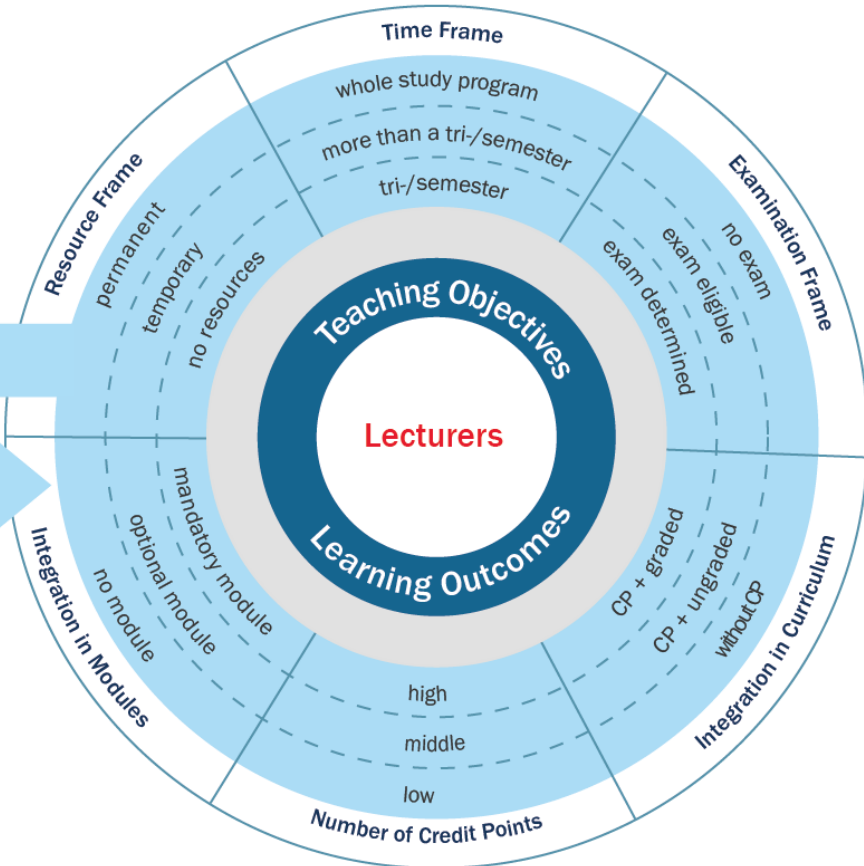

Pedagogical level

Micro Level

Curricular level

Meso Level

# QUESTIONNAIRE I – MESO LEVEL

Please, fill out the questionnaire for the study unit that you are teaching or managing!

How is the students' research integrated in modules?	<input type="checkbox"/> The research project is mandatory for the students.	<input type="checkbox"/> The research project is optional for the students.	<input type="checkbox"/> The students do the research project voluntarily.
What is the value (number of CP) of the students' research?	<input type="checkbox"/> The research project has a relatively high value within the study program/module.	<input type="checkbox"/> The research project has a relatively low value within the study program/module.	<input type="checkbox"/> There is no direct reward (CP) students' research.
How is the student's research integrated in the curriculum?	<input type="checkbox"/> Students get credit points and grades for their research.	<input type="checkbox"/> Students get credit points, but no grades for their research.	<input type="checkbox"/> Students don't get credit points for their research.
What is the examination frame for the student's research?	<input type="checkbox"/> The type of exam is determined for the students' research.	<input type="checkbox"/> The teacher can choose between different types of exam.	<input type="checkbox"/> The students' research will not be examined.
What is the time frame for the student's research?	<input type="checkbox"/> Students have one semester/trimester for their research projects.	<input type="checkbox"/> Students have more than one semester for their research projects.	<input type="checkbox"/> Students do their research project(s) during the whole time of their study program.
What is the resource frame for the student's research?	<input type="checkbox"/> There are no additional resources for students' research.	<input type="checkbox"/> The resources for students' research are temporary.	<input type="checkbox"/> The resources for students' research can be used permanently.

# QUESTIONNAIRE II – MICRO LEVEL

Please, fill out the questionnaire for the study unit that you are teaching or managing!

Who decides about the research topic?	<input type="checkbox"/> The teacher provides the research topic.	<input type="checkbox"/> Students choose their research topic within a given frame.	<input type="checkbox"/> Students choose their research topic themselves.
Who develops the research question?	<input type="checkbox"/> The teacher provides the research question.	<input type="checkbox"/> Students develop the research question under the guidance of the teacher.	<input type="checkbox"/> Students develop the research question themselves.
How do students design the research process?	<input type="checkbox"/> The teacher sets phases and deadlines for the research process.	<input type="checkbox"/> Students plan the research process under the guidance of the teacher.	<input type="checkbox"/> Students plan the research process in a self-directed way.
How do students conduct the research?	<input type="checkbox"/> The teacher (or the tutor) guides the conduct of the research.	<input type="checkbox"/> Students conduct the research under guidance of the teacher (or tutor).	<input type="checkbox"/> Students conduct the research in a self-directed way.
What happens with the results of the students' research?	<input type="checkbox"/> The results remain in the safe space of the participants.	<input type="checkbox"/> Results are made public in the department/the faculty.	<input type="checkbox"/> Results are published and are visible university-wide (or beyond).
How do students reflect on their research?	<input type="checkbox"/> The teacher (or tutor) provides cause for reflection.	<input type="checkbox"/> Students are encouraged to reflect on their research.	<input type="checkbox"/> Students reflect on their research in a self-directed way.
How do students get feedback during the research process?	<input type="checkbox"/> The teacher (or the tutor) provide (or demand) feedback at specific points of time.	<input type="checkbox"/> Provided and demanded feedback are combined.	<input type="checkbox"/> Students ask for feedback from the teacher or their peers.

# USE OF OUR MODEL

1. Analysis of existing RBL projects and courses
2. Design of future RBL projects and courses
3. Coaching of lecturers regarding their RBL projects and courses
4. Comparison of lecturers' and students' grades of autonomy in different educational systems

# USE OF OUR MODEL IN THIS WORKSHOP

1. Analysis of existing RBL projects and courses
2. Design of future RBL projects and courses
3. Coaching of lecturers regarding their RBL projects and courses
4. Comparison of lecturers' and students' grades of autonomy in different educational systems

# OVERALL TASK A: FEEDBACK

Please, provide us with some feedback!

Yellow: I like the model (to some extent), because...

Red: (To some extent), it does not work, because...

# OVERALL TASK B: YOUR PROJECT

Please, think about a research-based learning project you have organised or you are going to organise.

Alternatively: Think of a research project you have experienced as student or a research-based learning project that is organised at your university/by a colleague.

# TASK 1:

Is the students' research project rather open-ended (compared to: close-ended and well defined) or can you anticipate what the students will discover (on a scale from 1 to 5)?

## TASK 2:

Fill in the first questionnaire with regard to the organisational conditions under which your students' research projects take place.

Mark your answers on the flipchart with **RED** dots.

Next to the dot, please indicate the country in which the project takes (took) place.

## TASK 3

Please fill out the questionnaire on pedagogical decisions with your students' research projects in mind.

Mark your answers on the flipchart with **GREEN** dots.

# INDIVIDUAL PROFILE

## Project: Humboldt reloaded – University Hohenheim

## Fragebogen Mikroebene

SPRACHE ▾

Im Folgenden betrachten wir die Mikroebene Ihrer Lehrveranstaltungen (Lehr-/Lernsetting), d.h. die Entscheidungen, die Sie persönlich für Ihren Kurs treffen. Diese haben Auswirkungen auf die Autonomie der Studierenden und ihre Handlungsspielräume.

### Wer bestimmt das Forschungsthema?

- ☐ Lehrende geben das Forschungsthema vor.
- ☐ Innerhalb eines vorgegebenen Rahmens legen die Studierenden ihr Forschungsthema fest.
- ☐ Die Studierenden legen das Thema ihrer Forschungsarbeit selbst fest.

# TASK 3 – DISCUSSION PART

Why did you make this decision?

What are your experiences with it?

What has to be different to give students more autonomy during their research?

# OVERALL TASK A: FEEDBACK

Please, provide us with some feedback!

Yellow: I like the model (to some extent), because...

Red: (To some extent), it does not work, because...
